Director, Cancer Care Center

The Cancer Care Center at Upper Valley Medical Center

UVMC Cancer Care

The Cancer Care Program is a Community Hospital Cancer Program as designated by the American College of Surgeons (ACoS) Commission on Cancer (CoC) and provides the full spectrum of oncology patient and community services including radiation, medical and surgical oncology as well as research via the Dayton Clinical Oncology Program. We offer High Dose Rate (HDR) Brachytherapy treatments including Breast, Prostate, Cervical and Skin, as well as Intensity Modulated Radiation Treatments (IMRT).

Cancer Care Center Expansion Project

Our Infusion Clinic provides treatment for many additional medical and surgical conditions including management of symptoms and side effects along with placement of intravenous access devices.

Through local support from the John J. Dugan Memorial Fund and Bill and Ruth McGraw Memorial Fund, we have been able to enhance our long-term services, such as our heat and massage infusion chairs and our dedicated CT scanner, but have outgrown our current facility. The majority of our population, including Miami, Shelby and Darke counties, need conveniently located, accessible care. We feel this is a very high priority for our patients. That is why we have continued construction of Phase II – our ground Level Infusion Center.

Phase I was completed in March of last year with a new vault and linear accelerator for treating all of our radiation patients.

Now we are putting the finishing touches on the new infusion area which provides each of our patients with individual treatment rooms overlooking a healing garden. The space will offer our patients convenient access as well as comfort and privacy.

We have created a center of excellence for Cancer Care and infusion patients, for quality care close to home!
